*VIRTUAL EVENT*

**September 29-30, 2020**

**Renaissance of Light Quality:**

SSL Industry Swaps Focus from Efficiency to Architecture

**The Tunable Challenge  
from WW-CW to spectrum control**

Steve Paolini – Telelum LLC

29sep20

# Agenda

- Levels of control and tuning
- Object colors
- Light source spectrum
- Observers
- Daylight
- Moving outside the box we built
- Summary

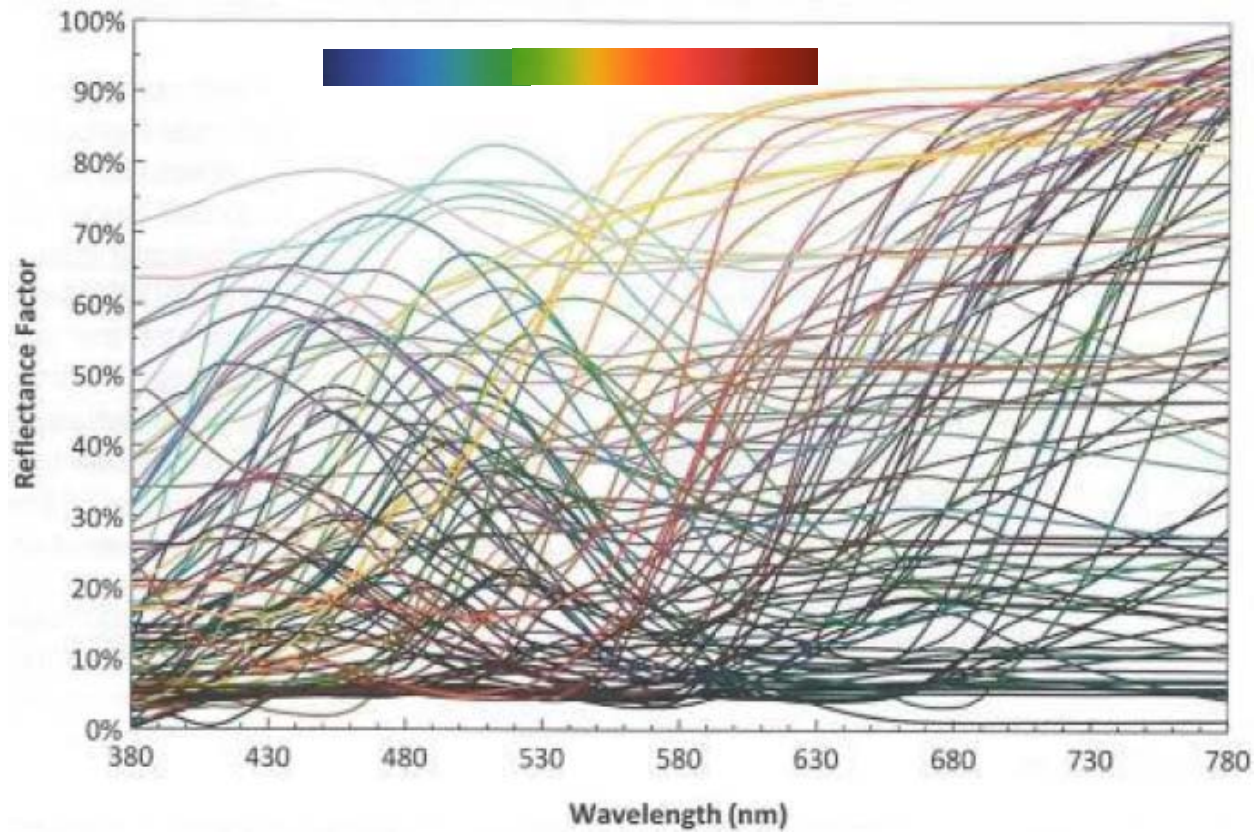

# Control and Tuning

- Dimming – intensity control, fixed CCT
- Warm-dim – intensity control, CCT changes
- WW-CW – intensity control, 1D CCT control
- Color change – RGB intensity control, 2D chromaticity control
- Spectral tuning – 4 or more colors, “3D” chromaticity control
  - Many SPD solutions with constant chromaticity
- Daylight tuning – 7 or more colors (ROYGBIV), no gaps, 660nm
  - Deep red is key for attractive skin color and blue sky
    - Typical red is actually orange
  - ROYGBIV – Sir Isaac Newton, Opticks, London, 1704

## Check the Box vs. Walk the Talk

- Dimming – 30-100% vs. 0.1-100%
- Warm-dim – CCT changes vs. blackbody, high Rf
- WW-CW – 3000K/5000K Rf80 vs. 2700K/6500K Rf90
  - Engineered spectrum, “daylight” LEDs
- Color change – RGB vs. RLB or RLBW (L=lime, PC-green)
- Spectral tuning – RGBW vs. 5 non-white channels
- Daylight tuning – 7 or more colors (ROYGBIV), no gaps, 660nm
  - Deep red is key for attractive skin color and blue sky

# TM-30 Objects

Courtesy of Michael Royer, PNNL

# Deep Red is Key to Proper Skin Rendition

About half the response is >600nm

# Observers

We have noticed, that if the underlying SPD of two light sources is significantly different, that matching chromaticities may not match for different people.

Some will see white, some a greenish tint, and some a pinkish tint from the same source.

# Daylight Data

Aug15 to Jan19 (1900 recordings)

# Recording Locations

Abisko, Sweden	Göteborg, Sweden	Newark airport	Shinagawa, Japan
Akihabara, Japan	Guzhen, China	Newport Beach, CA	Shinjuku, Japan
Banglore, India	Houston airport	Orlando, FL	Singapore
Bologna, Italy	Irvine, CA	Palo Alto, CA	Sishane, Turkey
Brännö Island, Sweden	Istanbul, Turkey	Panama City	Somerset, PA
Bregenz, Austria	Kingsten, Sweden	Penang, Malaysia	Stockholm, Sweden
Burbank airport	Kuala Lumpur, Malaysia	Point Vicente, CA	Styrsö Island, Sweden

# Time

- Time is fundamental to life
- Time is fundamental to daylight and fire
- Electronic illumination systems need a time base

# Day of sunlight

- Illuminance sensor pointed up at a mostly blue sky in Saratoga, California
- Starts: 28JUN18 at 05:48  
Ends: 28JUN18 at 20:48
- Lux range in actual recording: 10,000:1
- Color temperature range: 5,700K to 70,000K

# Claude Monet – “Haystacks”

The series shows differences in perception of light across various times of day, seasons, and types of weather.

1890-1891 series [http://en.wikipedia.org/wiki/Haystacks\\_\(Monet\)](http://en.wikipedia.org/wiki/Haystacks_(Monet))

				
<p><i>Grainstacks in the Sunlight, Morning Effect</i>, 1890. Oil on canvas. Private collection.</p>	<p><i>Haystacks, (Midday)</i>, 1890-91, National Gallery of Australia</p>	<p><i>Wheatstacks (End of Summer)</i>, 1890-91. Oil on canvas. Private collection.</p>	<p><i>Haystack, Morning Snow Effect (Meule, Effet de Neige, le Matin)</i>, 1891. Oil on canvas. Museum of Fine Arts, Boston.</p>	<p><i>Grainstacks Snow Effect, (Meules, effet de neige)</i>, 1891. Oil on canvas. National Gallery of Scotland, Edinburgh, Scotland</p>	<p><i>Wheatstacks (Sunset, Snow Effect)</i>, 1890-91. Oil on canvas. Art Institute of Chicago.</p>
				
<p><i>Wheatstack (Snow Effect, Overcast day) (Meule, effet de neige, temps couvert)</i>, 1890-91. Oil on canvas. Art Institute of Chicago.</p>	<p><i>Wheatstack</i>, 1890-91. Oil on canvas. Art Institute of Chicago.</p>	<p><i>Wheatstack (Thaw, Sunset)</i>, 1890-91. Oil on canvas. Art Institute of Chicago.</p>	<p><i>Wheatstack (Sun in the Mist)</i>, 1891. Oil on canvas. Minneapolis Institute of Arts.</p>	<p><i>Grainstacks. (Snow effects, sunlight)</i>, 1890-91. Oil on canvas. National Gallery of Scotland, Edinburgh, Scotland.</p>

# Controls

- Physical wall switch, slider dimmer (reference control)
  - Intuitive, instant-on
- In general – non-intuitive, slow, proprietary
  - avoided, disabled, frustrated

# Controls

- Problems are magnified with tunable systems
- In general we are asking too much from the customer
  - It's like having to create your own music and movies
- A few pre-programmed choices is one solution
- Player model is another solution
  - channel change and volume control

# A Path Forward

- Move beyond photometrics
  - Not sufficient to define daylight
- Move outside the built environment
  - Detachable power, batteries
- Use the entire visible spectrum
  - use efficiency vs. efficacy
- Adopt a time base (frames per second)
- Facilitate illumination content creation by artists

# Summary

- CCT, color, and spectrum control are fundamentally different
- The number independent color channels and the wavelength range matter
- Most objects have a continuous reflectance spectrum
- Light sources with wide continuous spectrum tend to be better
- Daylight is complex – wide continuous spectrum changes continuously
- Daylight CCTs are much higher than typical electric lights but include deep red
- Photometrics are not sufficient to capture the daylight experience
- Consider the player model for spectrally tunable controls
- There's a solution for every budget. Check the box or walk the talk.

The Recording and Playback of Light

Thank You
